Fractional CTO: Jeff Keller

FEEDBACK

Mentor

- Don't use SQL database
- Use Prisma

Client

- Add “buy it now” inventory instead of hard coded items from Goodwill's website
- Potentially build our own API while waiting on Goodwill to create their own

THE SYSTEM WILL HAVE A RESPONSIVE UI THAT WORKS ON VARIOUS SCREEN SIZES

[I dont have an account yet](#)

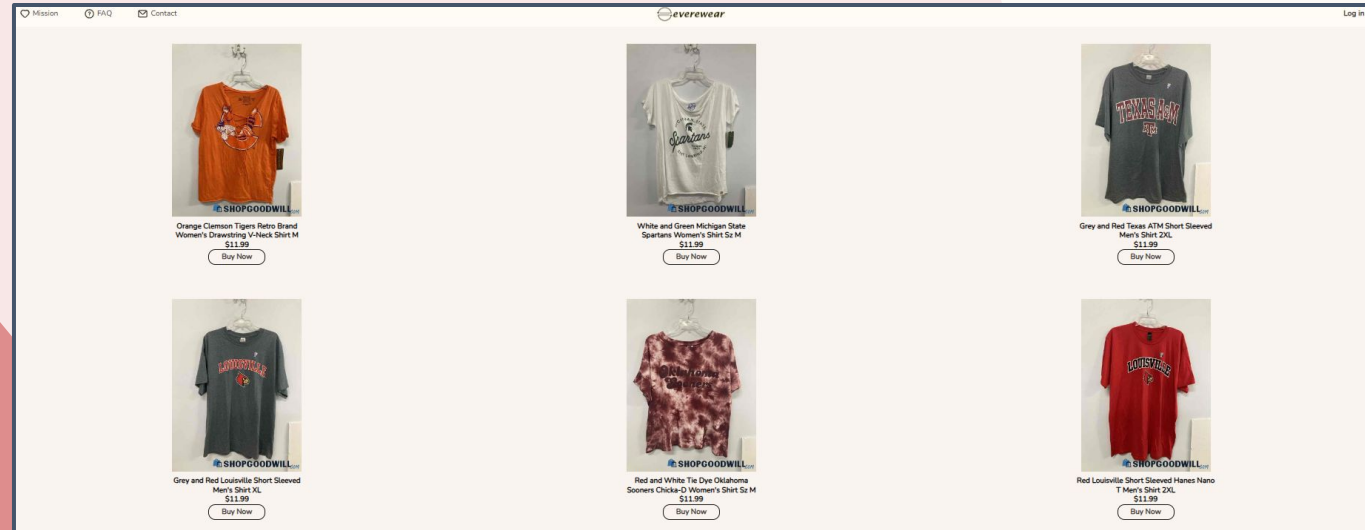

THE SYSTEM WILL CONTAIN A DATABASE WITH A SAMPLE INVENTORY THAT CONTAINS PRODUCTS

THE SYSTEM WILL LOOK COLOR COORDINATED AND BASED ON EVEREWEAR'S PREVIOUS COLOR SCHEME

THE SYSTEM WILL ALLOW FOR INFINITE SEARCHING OF ALL PRODUCTS

2ND ITERATION FEATURES

The system will work on most mainstream web browsers including Edge, Chrome and Firefox

The system will use various APIs like Goodwill to show item information and inventory

The user must fill out a style sheet prior to accessing the greater website

The website will be an Ecommerce website that supports Goodwill and other retail APIs inventory

RETROSPECTION

What did we learn?

- Don't underestimate how long a feature will take
- Asking for help does not make you weak
- Working together in person is more helpful than individually
- Learning the syntax of react is a headache

What did we sacrifice?

- Appearance
- Expansion of features

What will be our approach for iteration 2?

- Start early
- Work together more in person

THANK YOU
