Mentor Feedback

- Allow for nuance in style quiz questions
- Switching over to MongoDB will be easier since we're already using Prisma

Client Feedback

- Make small changes to design layout
- Filter out items that show up as “sold out” or “local pickup only”
- See if it would be possible to remove the item’s background
- Make it so the algorithm can be easily changed as we learn more about Goodwill’s data
- On board with switching over to MongoDB for part of the data

4th Iteration Features

Point System for Style Quiz

Instead of just doing a text search through Goodwill's inventory, we plan to make it so each answer to the style quiz will be marked with a certain number of points. From there, we will be able to use score to sort through inventory.

Personalization based on Clicks

Based on what item the user clicks on, it can add onto the already established point value so that the items displayed become more and more personalized.

Nuance

Adding more questions to the style quiz. An example of this being that a person may like more neutral colors overall for their clothing, but they may also prefer having a "pop of color" as well.

Aesthetics

We will be making slight changes to layout based on feedback from Anna. We will also be adding more visual elements to the style quiz to make it easier for the user to answer each question.

Ameco

- Add new test cases for the style quiz

Austen

- I worked on creating a search bar to search through the active inventory
- I also created some documentation for our API for the client.
- Worked on the basis of the point system mentioned for iteration 4
- Created some backend tests with the help of Ameco

Brennan

- Due to the changes to the requirements, I started working on the biggest part of the fourth iteration (the customized algorithm)
- Testing for the Cart functionality
- Testing for Account page
- Worked on redirecting straight to shopgoodwill.com when clicking on “add to cart” due to client requirements changing

Haley

- Due to the business plan change, I went through and removed the portions of the account details page that would no longer apply to the user
- Added way for user to re-take style quiz from account details page
- User details now display under account details
- Edited layout/spacing within tests
- Updated requirements
- Scheduled meetings & took meeting minutes

Yabets

- Expanded style quiz with more questions
- Implemented drop down menus for user input
- Created tests for both front-end and back-end
- Updated documentation
